

LAB SESSION 2

Outline of lab session:

- option for brief software tutorial (upon request, from previous lectures/exercises),
- (tentative time: 3:00) class discussion/review of VER:14.2,
- individual work on the exercises:
VER:14.2; add:2.2, 2.4, 2.7(1-2) (VER:14.1,3; add:2.1, 2.3)
— recommended order (optional problems in parenthesis),
- use Stata or Minitab, or both, as you prefer,
- lots of time for individual discussion (lecture topics, software details etc.).

Notes and questions for specific exercises:

- text, datasets and solution files all at the Exercises page,
- VER 14.3: maybe too early for today's lab, can also be discussed in the sessions of this week,
- add 2:1-4: try also some of the simpler exercises,
- all: practice your own coding/exploration through menus, in addition to browsing solutions or running the do-files.

Other news:

- first home assignment posted (the second model building lecture on Friday may be helpful as well), due 31/1,
- content switched for this week's two lectures.
